

Kelly Leaveck

Full Stack Web Developer | kelly.leaveck@gmail.com | Studio City, CA

Coding Experience:

-Three years of Front End web development creating my own web development and marketing business. Followed by a five month immersive Back End coding bootcamp.

This was followed by several months of independent study and freelancing.

Projects:

ALGO APP

-A powerful tool designed to help beginners become masters in Javascript Algorithms. Phase One of the project is complete and ready for users. The algo app is built in Python and uses a SQL database, and also takes advantage of core languages such as Javascript, HTML and CSS. Phase Two will start shortly and involves extensive JS TDD technology.

DOJO OVERFLOW

-Dojo Overflow was built to recreate much of the functionality of Reddit. DO uses Socket.io for real-time communication, integration of Facebook login API, and front back and middleware validations. With minimal styles, this is a feature driven app.

Project Back Black Light

-PBBL was a for fun front end project with a simple goal give people a plain fully black screen for various uses. Extra features include multiple color background choices and a pretty trippy strobe effect, facebook share button and analytics. This site also takes advantage of gzip compression and image optimization.

Travel Buddy

-Built in Python with a Django framework it uses an SQLITE database, this is a tool for sharing and coordinating travel plans and trips.
